

INGRESSUS CONTROLLER AND SLAVE TERMINALS

Centralized IP Access Control Topology

Benefits

- **Size**
For large scale implementations
- **Reduced cost per door**
A single controller can control multiple doors. Thus, the average cost of installation per door will decrease as the number of doors increase.
- **Scalability**
When servicing more doors, the capacity of the controllers are fully utilized, making the most out of your investment.
- **Lower installation cost**
Only minimal number of hardware need to be installed on-site as the controller only needs to be set up once.
- **Stability**
One of the benefits of a centralized system is that all data are kept in one single location, making it faster to process large amounts of data from different locations.
- **Leverage**
Affords you the option to build and choose from scratch the infrastructure required for your system, giving you flexibility.
- **Spread**
Monitoring can cover bigger areas as it is better suited for large-scale implementations
