

# ingressVMS ANSWERED!

## What is IngressVMS

IngressVMS is FingerTec's fully automated web-based Visitor Management System designed to seamlessly manage the influx of visitors coming in and out of your premises. IngressVMS comes complete with intact records and is fully integrated with FingerTec's Ingress Door Access System for a secured visitor management system.

## Why is VMS important?

The rapidly changing world demands each organization to take a closer look into the security issues and loopholes of its facilities. Preemptive measures have to be taken and an appropriate system needs to be in place to safeguard facilities from outside and inside threats, securing personnel and property simultaneously. Apart from securing a facility with access control system, visitor management system is about having the details of visitors who visit a facility and making employees jointly responsible for visitors they are bringing inside the company. By having a Visitor Management System in place complete with prior registration and ID identification, a company can easily keep the wrong people out and only let the right people in, keeping everybody safe at all times.

## Why industries are suitable for IngressVMS?

IngressVMS is suitable for industries that require high security and confidentiality protection; it is flexible with rich features for diverse visitor management processes and policy requirements to help you identify, select and implement the appropriate controls. High-end offices and residential buildings are in need of effective VMS to better manage the visitors into their organizations and premises as well as to keep their visitors' list clean at all times by making sure that visitors do not bring external security threats into any premises.

## What is a prerequisite to start using IngressVMS?

To be able to use IngressVMS, installation of Ingress door access system is a MUST because IngressVMS will be using crucial data in the Ingress server. At this moment, IngressVMS cannot be standalone without Ingress but FingerTec is keeping the option open for the future.

## What are IngressVMS's important features?

### Expedite visitor registration process online

IngressVMS offers incoming visitors with online preregistration where organizations can process the approval online, which can save a lot of time on both ends. Visitors can get approval before coming over, and the system can filter the good visitors from the bad ones to safeguard the premise(s).

### Sift out hostile visitors and maintain a clean visitor list

With sufficient information on hand, an organization can filter visitors who can be allowed into their premise(s). Those who fail to adhere to the rules and guidelines of visitors will be placed in the blacklist for future references.

### Link to Ingress Door Access System

IngressVMS must be linked to Ingress Door Access Control System and this connection allows assignment of access control permission to visitors, complete with each visitor's Route History, for effective monitoring and audit trail.

### Enhance Emergency Response

During emergencies IngressVMS can provide effective audit to determine who are still in the building and which are the last known point of access for effective evacuation. Visitor Management System is also important to enhance emergency response to natural disaster, fire, hijack and etc.

### Link to Third Party Security Solutions

IngressVMS can be linked to third party security solutions such as CCTV and alarm for a comprehensive access system besides projecting a positive image as a company that puts security first without compromising on visitors' convenience.

### Generate 5 Useful Reports

- **Visitor Profile Report:** Lists down all current and previous visitors in the system
- **Blacklisted Visitor Report:** Provides information about all blacklisted visitors and the reasons
- **Current Status of Visitor Report:** Presents the list of all current visitors who are still present in the premise(s)
- **Prebooked/Reserved Visitor Report:** Displays visitor requests to visit through web application but haven't checked in
- **Total Visitors Report:** Lists down quantity of visitors based on a specified date range

### User-friendly Interface

IngressVMS is designed with user-friendly interface complete with guides and manuals, suitable for all kinds of users even non-IT personnel.

### Supports a variety of languages

IngressVMS supports English, Malay, Indonesia, Spanish, Chinese Traditional, Chinese Simplified, Arabic, Hindi, Portuguese, Vietnamese, Thai for international clients' convenience.

## Do I need any other hardware to complete the IngressVMS?

IngressVMS requires your organizations to be installed with FingerTec devices that support RFID cards for access such as R2, R3, Kadex, iKiosk 100 Plus, Q2i, m-kadex, H2i and Face ID 3. Ingress VMS also supports all Ingress controller models. Time Attendance and Standalone products such as TA100CR, s-kadex and H3i cannot be used with IngressVMS because this system is meant for access control and it has to be connected to the central Ingress server. Face ID 2 and Face ID 4d are not compatible with IngressVMS because the terminals do not support TimeZone setting.

## Do you provide any demo to try before the purchase?

End-user will be provided with a 1-month trial license key for demo purpose and all FingerTec resellers will be issued with trial license keys for a period of one year.

The keys can be obtained through our website at [http://www.fingertec.com/images/w\\_brochure/software-ingressVMS\\_e.html](http://www.fingertec.com/images/w_brochure/software-ingressVMS_e.html)
