

Access from a Distance with **The Remote Control Door Switch**

The remote control door switch is a wireless option to link up with an access control system. It is recommended to install it on the ceiling or together with a door controller. In the event of a system failure, the administrator can unlock the door remotely either from inside or outside the premises. Besides that, for an office environment, the Remote Control Door Switch is a useful accessory for receptionists to allow visitors to come and go without manually having to unlock the door.
