Visitor Management System

Automate your premise's visitor management with the latest IngressVMS, designed to provide a systematic procedure to manage the coming and going of visitors. IngressVMS simplifies visitor registration process with its online pre-registration that provides the tenants with information about the visiting persons before accepting the visit and for the security guards to verify their status upon arrival. By filtering out dodgy visitors, IngressVMS could potentially improve security threats of your premise and at the same time have all the records of past visitors for future audits and reviews. IngressVMS is directly linked to FingerTec's door access solution Ingress database, and it could track the history route of visitors visiting your premise, leaving nothing lost in translation.

Welcomes visitors, maintains security

Registration Process Online
Employee/Visitor can pre-register visits ahead of time to save the visitors from all the waiting time and providing of information. Approval or rejection of a visitor can also be done online with reasons, to speed up the process.

Easily Assign Door Access
Linked with FingerTec's comprehensive Door Access software Ingress, visitors can be assigned with door access permission with type of verification, traceable by the system.

Intact Visitor Data
By having all visitor data intact and available online, the next visit will be a breeze for visitors who are in the white list and the blacklisted visitors will not be allowed entry to the premise with solid reasons.

Route History
IngressVMS records the route history of each visitor, providing the management with transparent information about all the visits by outsiders to the premise and persons they meet in the company.

Automate Process
No more writing in the visitor logbook by security guards/visitors. Manual recording of information is prone to errors and this will provide management with wrong information during emergencies. By having the process automated, data accuracy is not dubious anymore.

Effective Emergency Audit
During emergency, IngressVMS can produce information about visitors who are still in the building and those who have left for authorities to expedite the evacuation process. By having the route history, the authority is informed about the last known entry/exit of visitors to carry out effective evacuation.

User-Friendly Interface
IngressVMS is designed with simple and user intuitive interface making it easy for even a non-IT personnel to handle the system without much training, and guides are provided to smoothen the process along the way.

Blocked Visitors List
Visitors need to comply with rules and regulations of a premise in order to stay in the white visitor list, failure to do so or repeat offenders will be moved into the black list until further decisions is made by the authorities.

INGRESS SERVER
Ingress server connection to access control devices

▶ IngressVMS is a full web-based system

▶ Integrated with Ingress Door Access System
  - Assign access control permission to visitors
  - Link third party security solutions such as CCTV and alarm for a comprehensive access system
  - Database is host under Ingress MySQL database only

▶ Generated Important Reports, filterable by selected fields
  - **Visitor Profile Report**
    Lists down all current and previous visitors in the system
  - **Blacklisted Visitor Report**
    Provides information about all blacklisted visitors of the company
  - **Current Status of Visitor Report**
    Presents the list of all current visitors that are still present in the premise
  - **Prebooked/Reserved Visitor Report**
    Displays visitor requests to visit through web application but haven't checked in
  - **Total Visitors Report**
    Lists down quantity of visitors based on a specified date range

▶ Online guides and manual available

▶ Languages
  - English • Malay • Indonesia • Spanish • Chinese Traditional,
  - Chinese Simplified • Arabic • Hindi • Portuguese
  - Vietnamese • Thai
