

# Webster

Easy Data Centralization with Webster

Introducing Webster, an online web based platform, similar to an SDK, that is used to consolidate and centralize the database for time and attendance. With the Webster platform, you can access raw time attendance data anywhere and everywhere using an internet browser. Webster also has the capacity to act as a platform between a reader and the TCMS V2 bundled software or even TimeTec, the newly released web-based attendance solution. Webster will pull the raw data from the FingerTec terminals in a real-time manner and allow any other configured third party program to connect with it and download the data for further analysis. With the available function of logging into your Webster account from anywhere at anytime, Webster is truly a convenience you wouldn't want to miss.

#### Real-Time Data Transferring

Real-time user info, transaction log and terminal data transmission and synchronize to Webster server via internet connection (http protocol) making it secure and stable.

#### Supports Ethernet, Wi-Fi and GPRS Connection

Terminal supports to connect to Webster server by using Ethernet, Wi-Fi or GPRS connection from different locations.

#### Data Centralization

Centralize over hundreds of terminals to a single Webster database for easier data manipulation.

#### Remote Monitoring Terminal

Remote monitor terminals activity and control terminals from different locations.

#### Automatic Date and Time Synchronization

Automatic date and time synchronization with Webster server and supports different time zone for each terminal from different locations.

#### Web Based Management

After the initial installation of Webster, management of Webster can be done simply via the web and compatible with several web browsers like IE, Firefox, Chrome, Safari, Opera and etc.

#### Simplified Data Processing

With Webster, it is simple for the TCMS V2 or any other third party software to login and download attendance data for further processing.

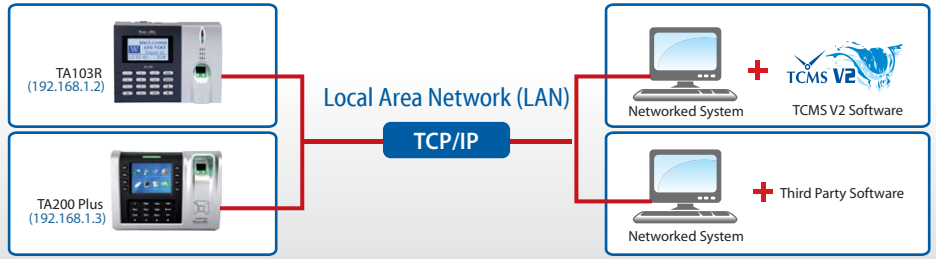

#### Integration Made Easy

Webster acts as a platform that centralizes data from FingerTec terminals, making it easy for you to integrate any third party software at any point of time by accessing the Webster MySQL database.

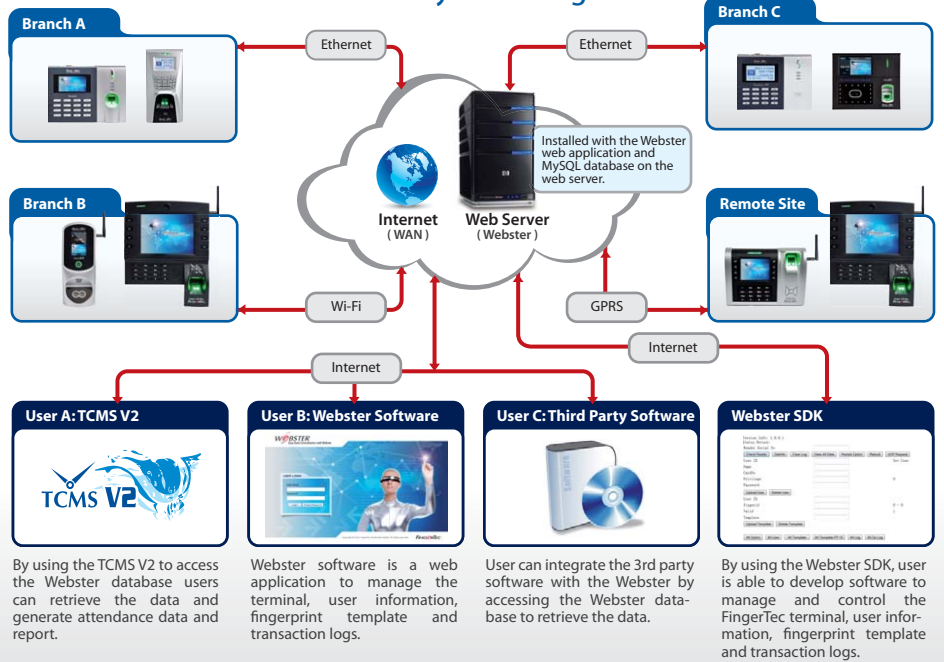

Conventional Functioning without Webster

Functioning with Webster

Webster System Diagram

Advantages of a Webster Integrated System

- Data is easily and remotely centralized in one single server.
- Large data storage without having to worry about housekeeping.
- Easily integrated with TCMS V2 or any other third party software.
- Management of data is all done via the web.
- Branch and HQ management easily done from any location.
- Firewall friendly (using standard port 80)
- Uses the latest Microsoft technology, Visual Studio .NET 2010 on .NET Framework 4.0.
- Uses MySQL Database: the world's most popular open source, reliable & fast database.

Webster-Enabled Terminals
